

BondOS Public AI Impact Summary

Plain-English summary for BondOS coaching, surveys, insights and app support.

Version: 2026-05-12 | Public summary, not legal advice | Next scheduled review: 2026-08-12

AI Act position

BondOS is built for relationship reflection, communication practice, surveys, insights and app support. It is not designed to make legal, medical, employment, credit, education, immigration, law-enforcement or other high-stakes decisions.

If a future BondOS feature could affect someone in a regulated or high-risk way, that feature needs a separate review before activation. The review covers purpose, users, data, oversight, vendors and safety controls.

Public impact assessment summary

Purpose: help users reflect, practise conversations, understand patterns and continue inside the BondOS app.

People affected: BondOS users, newsletter readers, survey takers, affiliates, support contacts and legal requesters.

Data used: account details, app activity, survey answers, messages to support or legal, and technical records needed to run the service.

Safety, oversight and providers

Support, legal, safety and account issues can be reviewed by authorised people. Public AI content is checked before release where needed.

Approved AI, hosting, storage, email, payment, app-store, analytics and support providers may process limited data for the service.

BondOS avoids therapy, diagnosis, crisis claims and guaranteed outcomes. Users should seek professional or emergency help where needed.

Issue handling and references

Security, privacy, vendor and AI safety issues are reviewed and handled through the right support or legal path.

Official references used for this summary include the European Commission AI Act overview and the AI Act Service Desk Article 27 summary on fundamental-rights impact assessments. Article 27 applies to specified high-risk deployments and does not make this public summary a formal FRIA filing.
